

ASPECTS OF SYNONYMY IN THE TEXTS OF SCIENCE POPULARIZATION WRITTEN BY THE “ȘCOALA ARDELEANĂ” SCHOLARS

Liliana SOARE
University of Pitești

ABSTRACT

The research of synonymy, well-represented in the texts of popularization science elaborated by the Transylvanian scholars, represents an important source of identifying some decisive elements for the configuration of the literary language of the period. In order to obtain an accurate image of the synonymy relations, we selected texts belonging to various scientific fields (medical texts, texts of natural sciences, geography, mathematics, linguistics), both translations and original works. The study pinpoints the resources of synonymy and how they manifest in the texts analyzed; thus, it was observed that the relation of synonymy is established between: old, traditional and regional terms; old terms and lexical borrowings; terms created in the language by calques or, more seldom, by derivation and lexical borrowings; regional terms and lexical borrowings; groups of words and lexical borrowings; lexical borrowings entered in Romanian from the same or various culture languages, in the same time or in different periods of time. As regards the number of the terms which are equalized within the linguistic mechanism of glosses, there were established synonymous series with two, three, four and five terms, with the observation that the bi-member series are the most frequently used. The series are also discussed from the perspective of their development, being emphasized the various changes at various levels.

Key words: *lexical borrowings, synonymy, synonymous relations, synonymous series, terminology*

Synonymy, as “an indicator of each language's development and perfecting level”¹, represents a semantic category relevant for the constitution of the various special vocabularies in the science fields. Vocabulary, the most flexible language sector, permanently adapts to the society's requirements of denoting, as accurate as possible, the new concepts and ideas. The changes in the vocabulary have direct consequences in the area of lexical synonymy, a phenomenon which, being sensitive to its transformations, “records all the moves caused by neologisms in the vocabulary”². Thus, synonymy is in deep concordance with the language and vocabulary development. The existence of synonyms provides the language with more various and nuanced

¹ M. Bucă, I. Evseev, *Probleme de semasiologie*, Timișoara, 1976: 118.

possibilities of expression, their appearance being closely related to the language history and evolution³.

The perspective of our analysis is a historical one, in our attempt to retain several elements of diachronic constitution of synonymous equivalents: "By observing the relations between old and new, between tradition and innovation within the vocabulary, by the concrete research of diachronic constitution of synonymous equivalents, a historical approach of synonymy can always lead to interesting conclusions"⁴. Such understood, synonymy represents "a diagnostic factor in the evolution of literary Romanian"⁵.

The borrowing from various culture languages both in diachrony and synchrony, have contributed to the constitution of synonymous series⁶. Even at a superficial research of the vocabulary of science popularization texts, the synonymous series distinguish themselves through frequency, being characteristic to each special vocabulary. The variety and complexity of synonymous relations from special terminologies have multiple causes: the old tradition of some sciences (medicine, for example), the special interest shown by the Transylvanian scholars for one or other of the science fields, as well as the existence of parallel lexical strata in all terminologies; they are formed by a superposition of two types of vocabularies: an old, traditional one and a neologic, erudite one. The permanent interpenetration between the old and neologic terminologies caused the development of synonymous series with profound implications in the stylistic configuration of these texts.

We are to observe, as follows, which are these resources of synonymy and how they manifest in the texts researched, trying to catch the complexity of the relation constituted. Thus, the synonymy relations⁷ are established between:

1. **old, traditional and regional terms:** *bale* "salivă" (LB, s.v., VA, 49) – *scuipat* (SIN, 90, VA, 49); *ghindură* "glandă" (SIN, 90, FDB, 88) – *ghindă* (VA, 242) – *gâlcă* (LB, s.v., VA, 243); *guturai* "catar" (LB, s.v.) – *troahnă* (LB, s.v.); *foale* "abdomen" (VA, 101) – *vintre*, *vintricel* (LB, s.v.), etc.

⁴ Doina Babeu, *Sinonimia, particularitate relevantă a lexicului*, în S. Drincu, Maria Purdela Sitaru (coord.), *Limba română literară în secolul al XVIII-lea. I. Lexicul tipăriturilor blăjene din perioada 1750-1760*, II, Timișoara, 1984: 18.

⁵ Florica Dimitrescu, *Dinamica lexicului românesc – ieri și azi*, București, 1994: 30.

⁶ Although the concept of *synonymous series* represents a common place in specialty literature, referring to synonyms' organization in (quasi)equivalent terms classes, its acceptation differs, due to the various criteria used; thus, the series are formed either by terms identical from the perspective of their meaning but different from a stylistic point of view or by terms which distinguish from each other at a semantic level by certain features (cf. Angela Bidu-Vrânceanu, Narcisa Forăscu, *Modele de structurare semantică. Cu aplicații la limba română*, Timișoara, 1984: 66).

⁷ The synonymy is mostly partial, seldom total.

2. old terms and lexical borrowings: *adunare* (OPA, 22) *adaogere* (SIA, 12) – *adîtie* (SIA, 21, PA, 91, OPA, 22); *miazăzi* (GSP, I, pref.) – *sud* (GSP, I, pref.); *apus* (GSP, I, pref.) – *vest* (GSP, I, pref.); *boală* (FDB, 81) – *morb* (FDB, 74); *bold* (VA, 163) – *instinct* (VA, 163); *brâncă* (FDB, 74) – *anghină* (FDB, 74); *căciulie* (LB, s. v.) – *bulb* (SIN, 5); *ceapă* (SIN, 5) – *bulb* (SIN, 5); *cerul gurii* (FDB, 72, LB, s.v.) – *palat* (SIN, 48, FDB, 72); *clește* (FDB, 115) - *foarcepă* (FDB, 115); *dobitoc* (SV) – *animal* (FDB, 64, VA, 91); *fir* (HPP, 23) – *fibră* (PMV, 4); *grai* (BDT, 44v) – *vorbă* (MIR, 320) – *verb* (BDT, 38v, DLGR, 82); *guturai* (LB, s.v.) - *troahnă* (LB, s.v.) – *catar* (PAM, 10, LB, s.v.); *hotărâre* (GSP, I, 172) – *sentenție* (GSP, I, 172); *hrană* (LB, s.v.) – *nutriment* (FDB, 107); *miazănoapte* (GSP, I, pref.) – *nord* (GSP, I, pref.); *ostrov* (SIN, 15, GSP, I, pref.) – *insolă* (GSP, I, 20); *rană* (FDB, 64) – *plagă* (FDB, 64); *răsărit* (GSP, I, pref.) – *est* (GSP, I, pref.); *râie* (FDB, 94) – *scabie* (FDB, 94); *pildă* (OPA, 83, PA, 14) – *exemplu* (LB, s. v., HPP, 30); *rod* (MVV, 25) – *fruct* (MVV, 7, TAO, 80, VA, XVI); *scoc* (PMV, 4) – *canal* (PMV, 4); *târâtoare* (SIN, 103) – *amfibii* (SIN, 103); *trup* (PAM, 16, LB, s.v.) – *corp* (FDB, 96), etc.

3. terms created in the language by calques or, more seldom, by derivation and lexical borrowings: *acrimă* (SIN, 36, PAM, 29) – *acid* (MVV, 85); *activă* (VA, 57) – *lucrătoare* (TVM, 20, VA, 57); *aprindere* (FDB, 57) – *înfoicare* (SIS, 13) – *obrântitură* (FDB, 57) – *înflămație* (FDB, 57); *ărătare* (FDB, 83) – *fenomen* (FDB, 83); *așezământ* (MVV; 33) – *strat* (MVV, 33); *cântime* (MVV, 63) – *cvantitate* (TAO, 62); *câtuitor* (SIA, 28, PA, 27) – *cvoțient* (SIA, 28, PA, 27) “cât”; *cunună* (HPP, 29) – *corolă* (SIN, 6); *deînmulțit* (SIA, 22) – *multiplicand* (SIA, 22, PA, 21); *dempărțit* (SIA, 27) – *divident* (PA, 26, SIA, 27); *frângere* (PA, 53) – *spargere* (OPA, 58) – *fracție* (PA, 53); *hotărâre* (SMS, 74) – *definiție* (VA, 189); *lucrător* (VA, 57) – *activ* (VA, 57); *față* (TGR, 107) – *personă* (MIR, 320); *făcător* (SIA, 22) - *factor* (DMA, 56, OPA, 29); *femeiesc* (TGR, 8, DLGR, 43) – *feminin* (IO, 145); *ființă* (SIF, 87) – *substanție* (VA, 21); *ființă* (LB, s.v.) – *existentă* (TAO, 57); *fire* (SIN, f.t., FDB, 55, LB, s.v.,) – *natură* (SIN, f.t., FDB, 55, LB, s.v.); *floare* (IST, 60) – *față* (SIN, 29) - *color* (SEC, 108, SIF, 101, TAO, 61, SIN, 4, LB, s. v.); *hotărâre* (LB, s. v.) – *definiție* (VA, 189); *lucrare* (SIA, 12, PA, 12) – *șpețieș* (SIA, 12, PA, 45) “operătie matematică”; *împărțitor* (SIA, 28, PA, 26) – *divizor* (SIA, 28, PA, 26, OPA, 35); *încuiere* (FDB, 66), *încuietură* (LB, s.v., PAM, 21) – *constipație* (FDB, 66); *împărțire* (PA, 11) – *divizie* (SIA, 27, OPA, 35); *înmulțire* (PA, 11) – *multiplicație* (SIA, 21, PA, 94, LB, s. v.); *nealcătuit* (**SMS**, 76) – *simplu* (PA, 80); *nefătesc* (TGR, 156, DLGR, 82) – *impersonal* (TGR, 159); *răsuflare* (SIN, 73, FDB, 63, PAM, 7) – *respirație* (FDB, 63, LB, s.v.); *pielită* (FDB, 88) – *membrană* (FDB, 88); *sugător* (PAM, 7) – *limfatic* (PAM, 7); *tăiere* (FDB, 111, LB, s.v.) – *amputație* (FDB, 111); *treaptă* (MVV, 60) – *grad* (PAM, 4, VA, 181), etc.

4. **regional terms and lexical borrowings:** *farbă* (VA, 5) – *culoare* (VA, 5), *fânari* (SIN, 6) – *alge* (SIN, 6); *sudoare* (LB, s.v.) – *transpirație* (FDB, 19), *galițcău* (SIF, 99) – *vitrior* (SIF, 99).

5. **groups of words and lexical borrowings:** *comete* (SIF, 190) - *stele cu coadă* (SIF, 190); *hippopótamul* (SIN, 60)- *calul de apă* (SIN, 60); *flus* (GSP, I, 101) - *curgere de mare* (GSP, I, 101).

6. **lexical borrowings entered in Romanian from the same or various culture languages, in the same time or in different periods of time:** *alifie* (LB, s.v.) – *pomadă* (LB, s.v.); *aligatore* (SIN, 71) – *caiman* (SIN, 71); *apoplexie* (LB, s.v.) – *gută* (VA, 2, LB, s.v.); *a contamina* (FDB, 91, LB, s.v.) – *a contagi* (LB, s.v.); *doctor* (PAM, 9, LB, s.v.) – *medic* (LB, s.v.); *paradigmă* (LB, s.v.) – *exemplu* (LB, s. v., HPP, 30, MVV, 23); *spătă* (*spătă*) (PAM, 24, LB, s.v.) – *apotecar(iu)* (PAM, 24, LB, s.v.); *spătărie* (PAM, 24, LB, s.v.) – *apotecă* (LB, s.v.); *stih* (TGR, 195) – *vers* (TGR, 195), etc.

The existence of synonymous series can be explained both by the different origin of the constituents and by the fact that, in the basic vocabulary, there are more words from the same lexical family. The semantic equivalence of synonyms is realized through glosses. The analysis of glosses, which are also representative for the phenomenon of synonymous equivalence, allowed us to identify several synonymous series (in each series, the lexical borrowing is placed first):

1. **with two members:** *acid* – *acrine*; *activ* – *lucrător*; *amputație* – *tăiere*; *canal* – *scoc*; *castrația* – *jugăirea*; *cauză* – *principiu*; *consilier* – *sfetnic*; *corp* – *trup*; *cvoțient* – *câtuitor*; *dirigență* – *sârghiuță*; *divident* – *dempărțit*; *divizie* – *împărțire*; *divizor* – *împărțitor*; *est* – *răsărit*; *evaporăție* – *răsuflare*; *fantasme* – *năluci*; *element* – *stihie*; *feminin* – *femeiesc*; *fenomen* – *arătare*; *fibră* – *fir*; *foarcepă* – *clește*; *forță* – *silă*; *fruct* – *rod*; *i(n)solă* “*insulă*” – *ostrov*; *moment* – *cirtă*; *multiplicand* – *deînmulțit*; *multiplicăție-înmulțire*; *nega* – *tăgădui*; *nociv* – *vătămător*; *nord* – *miazănoapte*; *ocasie* – *prijej*; *opac* – *întunecat*; *plagă* - *rană*; *protector* – *apărător*; *remediu* – *leac*; *respirație* - *răsuflare*; *scabie* – *râie*; *scop* – *sfârșit*; *simplu* – *nealcătuit*; *sud* – *amiazăzi*; *teritoriu* – *ținut*; *alleanță* – *unire*; *vapori* – *aburi*; *vassal* – *supus*; *vest* – *apus*;

2. **with three members:** *adăția* – *adunarea* – *adaogerea*; *afte* – *rănituri* – *beșicuțe*; *antene* – *coarne* – *pipăitori*; *catar* – *guturai* – *troahnă*; *celeritate* – *pripire* - *iuțeală*; *constipație* – *încuiere* – *încuietură*; *diferență* – *disclinire* - *deosebire*; *exemplu* – *paradigmă* - *pildă*; *fantazie* - *nălucire* – *închipuire*; *fluid* – *moliciune* - *curătorie* (de aer); *fracție* – *frângere* – *spargere*; *golf* – *boaz* – *sân*; *grad* – *treaptă* - *studenă*; *înflămație* – *aprindere* – *obrintură*; *melanhonie* – *mâhnire* - *întristăciune*; *palat* – *ceriul*; *gurei* – *limbă*; *pistil* – *mez* – *fâmeie de floare*; *principiu* – *început* – *temei*; *verb* – *grai* – *vorbă*;

3. **with four members:** *astremitatele – marginile – capetele – sfârșiturile; culoare – față – farbă – floare; înflamație – aprindere – obrântitură – încocare; port – vad – liman – schelă;*

4. **with five members:** *reștanție – rest – rămășiță – osebire – deschilinire “rest”.*

The most numerous are the series with two synonymous terms, which demonstrates the intention of the Transylvanian scholars of finding the most adequate equivalents, capable of providing the accuracy of communication; it has already been observed that "...the more the synonymous chain is longer, the more the possibilities of replacing a term with the others are rarer. Generally, there can be established a relation of reverse proportionality between the length of the synonymous chain and the possibilities of substitution due to the fact that the semantic spheres of the synonyms are intersected only on a limited surface, each term bringing new meanings on a functional and stylistic level. Thus, the commutation operation, specific of synonyms identification, can attract the modification of the semantic value of the statement"⁸.

The synonymous series have experienced their own history, with common or specific features for each of them. From the perspective of their circulation in time, we can observe that some have disintegrated, keeping only the neologic terms, whilst its old synonym has entered the passive vocabulary or has become an archaism: *boaz, cirtă, săn, silă, sfetnic*; some belong to the literary language: *castrație, remediu*, others to the popular language: *jugăniare, leac*. There are series, rather numerous, in which the lexical borrowings continue to coexist with the old terms, already existent in Romanian at the time of their penetration, contributing to the creation of synonymous series: *castrația – jugăniarea; cauză – pricina, exemplu – pildă, diferență – deosebire, ocazie – prilej, opac – întunecat, respirație – răsuflare*, etc. "This coexistence, this symbiosis has created delicate problems of competition and synonymy. Thus, such pairs bring the Romanian language richness unknown by other languages".

Some lexical borrowing has not integrated in the literary language: *malleol – ciocănuț “mlădiță”*, whilst others are only used in the literary language and the scientific vocabulary. In spoken language, they are still resisted by the speakers, who prefer using old synonyms: *boală* instead of neologisms like *maladie, morb, întunecat* for *opac*, *leac* for *remediu*, *râie* for *scabie*, etc. Another situation is that in which the terms have differentiated semantically and they are no longer synonyms in the literary language: *arătare – fenomen, sfârșit – scop, silă – forță*, etc. Thus, in the lasting process of Romanian synonyms evolution there has already manifested a competition between old and new, phenomenon which has produced

⁸ Florica Dimitrescu, *op. cit.*: 34.

semantic extensions or limitations, as well as substitutions or disappearance of words and meanings⁹.

The components of the synonymous series also differ from the perspective of their stability and position within the series. Depending on the period, the context as well as the linguistic conceptions specific of the period and the scholars, some components gain priority towards others. The texts of science popularization reveal the preeminence held by the neologic term which is equalized, in a synonymous series, with its old correspondent. This phenomenon is in perfect agreement with the scholars' desideratum as regards the dissemination and popularization of the new terms in order for them to penetrate the linguistic consciousness of the people. The main majority of the neologic terms introduced by them have resisted and the situation in which some neologisms: *apotecar*, *apotecă*, *spîter*, *spîterie*, etc., have become obsolete are very rare.

The synonymous series analyzed prove the utilization of a high number of neologic elements borrowed from Latin and Romance languages. The international borrowing of terms which exist in most of the European modern languages, "leads, on one hand, to a bigger stability of the borrowed words and, on the other, to drawing languages closer"¹⁰. These synonymous borrowings enrich the erudite vocabulary of the literary language and contribute to the precision of some meanings of the words already existent in the language, as well as to the refining of its stylistic possibilities. The great number of neologisms introduced and used by the scholars has created numerous interferences and synonymies in the literary language. The existence of synonyms can be explained by the coexistence and the superposition of the cultural patterns (because the texts reveal a syncretism of cult, erudite and old, traditional terminology), rather than by terminological inaccuracy.
