Abstract

This paper is the fourth one of a series aimed at reconstructing a unitary Rhaeto-Cisalpine written language, including ISO 639-3 Piedmontese, Ligurian, Lombard, Venetan, Ladin, Romansh, Emilian, Romagnol, Istriot and Friulian. Following the assumptions and the conclusions of Part I, we deal with the proposal of a standard form for conjugation of the verb.

Keywords: Rhaeto-Cisalpine, Padanian, written language, verb, parts of the speech, morphology, western-Romance languages, ISO 639-3, Piedmontese, Ligurian, Lombard, Emilian, Romagnol, Venetan, Ladin, Romansh, Istriot, Friulian, Cisalpine.

1 Introduction

This paper is the fourth one of a series aimed at reconstructing a unitary written-language system for the Rhaeto-Cisalpine (or Padanese) domain. The general framework we are working in is described in part I, II and III of this work [Meneghin \(2007; 2008; 2009\)](#). This paper specifically deals with matters related to the morphology of the verb. Nowadays there is a great deal of linguistic variation in this part of the speech in the Padanian domain (see e.g., [Brero 1967](#), 61–87; [Brunelli 2005](#), 15–29; [Caduff, Caprez & Darms 2006](#), 34–65; [Ganzoni 1983b](#), 82–146; [Ganzoni 1983a](#), 82–139; [Hull 1982](#), 532–615; [Nicoli 1983](#), 281–381; [OLF 2002](#), § 8; [Sanga 1979](#), 311–325; [Spescha 1989](#), 380–493; [Stich 2007](#), 94–129; [Toso 1997](#), 149–218; [Valentini 2001](#), 61–87; [Vitali & Lepri 2000](#), 23–35; [Zanetti 2004](#), 68–105; [Zof 2008](#), 107–123, 181–300).

See Table 19 in part II of this work ([Meneghin 2008](#), 144–146) to have a glance at a synoptic framework of the linguistic variation in the present indicative of the verb *to wash oneself*.

Our proposal is twofold: we suggest in fact a (nonexclusive) choice between:

1. writing the local forms of the verb in ORS orthography;
2. abide by a standard conjugation, mainly based upon contemporary Ladin (both Rhaetian and Dolomitic) forms and Friulian ones.

By a sociolinguistic point of view, the knowledge of both local forms and of the standard one should be spread throughout the whole linguistic domain, to make convergence easier. As to the option (1), the reader is referred to Part I ([Meneghin 2007](#)); of course the proposed standard forms of the option (2) should be written in ORS orthography as well.

Our main sources for shaping of the standard Padanese verb are [Hull \(1982](#), 532–615) (with all local forms considered), [Valentini \(2001](#), 61–87) (Dolomitic Ladin), [Caduff, Caprez & Darms \(2006](#), 34–65), [Ganzoni \(1983b](#), 82–146; [1983a](#), 82–139) (Rhaetian Ladin), [OLF \(2002](#), § 8) and [Zof \(2008](#), 107–123, 181–300) (Friulian).

1.1 The reconstruction of the Proto-Padanian verb

Because of its chief importance, and due to the difficulty in accessing the source, we reproduce here Hull's reconstruction of the conjugation of the Proto-Padanian regular verb ([Hull 1982](#), 535–538).

1.3 Criteria for shaping conjugation

As a consequence of the above argumentations, we have adopted the following criteria to construct the standard Padanian conjugation:

1. There are nine simple tenses, besides infinitive present: four in the indicative (Present, Imperfect, Preterite, Future), two in the subjunctive (Present, Imperfect), one in the imperative (Present), two in the participle (present, past).
2. There are eight compound tenses, besides the infinitive past: four in the indicative (Perfect, Pluperfect, Anterior past, Future perfect), two in the subjunctive (Perfect, Pluperfect), one in the imperative (Perfect), one in the participle (perfect).
3. Compound and simple tenses correspond each other according to the following scheme:

Present	↔	Perfect
Imperfect	↔	Pluperfect
Preterite	↔	Preterite perfect
Future	↔	Future perfect

4. Compound tenses are obtained by conjugating the appropriate auxiliary verb to the corresponding simple tenses and adding the past participle (see § 4).
5. As to the choice of the auxiliary verb, we suggest to get as close as possible to French and choose *haveir* ‘to have’ for all verbs but motion ones.
6. There are four groups of regular verbs, classified by the forms of the infinitives; the first and fourth group are further divided into two classes according as conjugation is inchoative or not (see Hull 1982, 539–542 specifically for first conjugation; see also Ganzoni 1983b, 98–99, resp. Ganzoni 1983a, 98–99, where two list of inchoative verbs can be found —Romansh; Puter, resp. Vallader):

-er: *parler* ‘to talk’ (noninchoative), *eviter* (inchoative), ‘to avoid’, with thematic *-e-* as in Piedmontese, Alpine Lombard,³ Emilian, Romagnol, Standard Ladin; *-ar* (as in Ligurian, low Lombard, Venetan, Friulian and Standard Romansh, should be accepted as well, at least locally, instead of *-er*;

-eir: *jodeir*, ‘to enjoy’, with diphthongued thematic vowel, see Hull (1982, 545);

-re: *perdre*, ‘to lose’ (also some verbs ending by unstressed *-er*); reconstructed upon ancient texts: see Hull (1982, 216, 544), but also keeping account of the neutral final *-e*, see Meneghin (2008, § 2.1.2);

³Also classical Milanese, see e.g. Maggi (1964).

-*ir*: *dormir* ‘to sleep’ (noninchoative), *finir* ‘to finish’ (inchoative), directly continuing the fourth Latin group.

7. Reasons why the final *-r* has been retained, even if in many dialects it has been shorn at the phonetic level, have been discussed in [Meneghin \(2007, § 3.3\)](#).
8. Verbal inflexions are always oxyton or paroxyton. There are no proparoxyton forms, for the sake of abiding by Gallo-Roman morphology (see e.g. [Hull 1982, 541](#) for motivations) and discarding contemporary Italian influences.
9. Preterite indicative is mostly used as a literary tense; present conditional coincides with imperfect subjunctive.
10. Negative imperative construction is carried out by postverbal negations such as *mia*, *nen*, *pas*, *not* and so forth: *chanta mia* ‘do not sing’, *parla not* ‘do not talk’.
11. Present participle is invariable as a verbal form, but it is inflected if it has an adjective function: *una tousa dormanta* ‘a sleeping girl’, but *ella la parla caminant* ‘she talks while walking’.
12. Gerund and present participle have been merged.
13. Present (resp. perfect) conditional are rendered by past (resp. pluperfect) subjunctive, but local specialised forms could be retained.
14. Fourth person inflexion can be always replaced by *hom* + 3rd person, examples: *hom parla* instead of *parlein* ‘we talk’; *hom perd* instead of *perdein* ‘we lose’.
15. A weak inversion conjugation is envisaged, in interrogative sentences or after adverbial clauses, see § 3.
16. Standard past participle has been shaped according to Dolomitic Ladin.

2 Conjugation schemes (simple tenses)

In the following tables, both strong and weak subjects (clitics) pronouns have been explicitly stated. Clitics correspond to the series in [Meneghin \(2008, Table 14\)](#); the first person clitic *I* is always written in uppercase letter, for the sake of distinguishing it from the sixth person one *i*. Also, a *l'* is used to make a *liaison* between a vowel ending subject clitic and a verbal form beginning by vowel (or mute etymological *h*), as in Piedmontese ([Brero 1967, 61–87](#)) and Ligurian ([Toso 1997, 149–218](#)). The particle *que* has been generally omitted in the conjugation of the subjunctive mood.

2.9.4 Participle

Present: finixant.

Past: finí.

3 Weak inversion

In interrogative sentences, or after adverbial clauses, the order subject-verb is inverted, and weak enclitic subject pronouns are placed after the verb. In spite of its seeming syntactic character, this is rather a morphological feature, since it directly invests the conjugation of the verb (a strong form of inversion is also envisaged, consisting in normal conjugation followed by a tonic subject pronoun, but this one is in fact a syntactical feature, which will be dealt with in the part of this work concerning syntax). Sandhi phenomena (crasis and assimilation) will take place in the weak inverted conjugation, but they will not be generally taken into account at the orthographical level:

3.1 Parler – weak inversion

3.1.1 Indicative

4 Conjugation schemes (compound tenses)

Compound tenses are constructed in the customary way:

Perfect indicative: present indicative of *haveir* or *estre* + past participle;

Pluperfect indicative: imperfect indicative of *haveir* or *estre* + past participle;

Preterite perfect indicative: preterite indicative of *haveir* or *estre* + past participle;

Future perfect indicative: future indicative of *haveir* or *estre* + past participle.

Perfect subjunctive: present subjunctive of *haveir* or *estre* + past participle;

Pluperfect subjunctive: imperfect subjunctive of *haveir* or *estre* + past participle;

The past participle of the verbs conjugated with the auxiliary *estre* is in concordance with the gender and the number of the subject of the verb, whereas the past participle of the verbs conjugated with the auxiliary *haveir* is not, and stays uninflected to the singular masculine form: *Algunes donnes i én gides* ‘Some women have gone’, *Algunes donnes i l’han parlé* ‘Some women have spoken’. Perfect conditional coincides with pluperfect subjunctive; pluperfect past indicative is mostly used as a literary tense.

4.8 Progressive forms

Progressive forms are constructed by means of *estre drera* + infinitive, or *estre en camin que* + infinitive (see Hull 1982, 549): *I son drera penser, I son-t-en camin que penser* 'I am thinking'.

5 The passive conjugation

The passive conjugation is formed by *venyir*+ past participle. As an example, the following is the passive conjugation of *videir* 'to see':

5.1 *Videir* 'to see' – passive conjugation (simple tenses)

5.1.1 Indicative

Present: mi I veny vidú (viduda), ti te venyes vidú (viduda), el al (ella la) veny vidú (viduda), nous e venyein vidus (vidudes), vous e venyeis vidus (vidudes), lour i venyen vidus (vidudes).

6 The reflexive conjugation

The reflexive conjugation is obtained by putting the reflexive particle *se* before the verb describing the action: *se laver* ‘to clean oneself’. Exception: in the imperative mood the reflexive particle is put after the verb. Compare [Meneghin \(2008, § 4.4\)](#), where the reflexive pronoun is discussed.

6.1 *Se laver* ‘to wash oneself’ – simple tenses

6.1.1 Indicative

8 Irregular verbs

There are a few irregular verbs; many strong Latin verbs have been reshaped to regular forms, see e.g. Hull (1982, 494–495) and reference therein for the preterite. Here we focus on the five main classical Romance strong verbs: *der* ‘to give’; *dir* ‘to say, to tell’; *fer* ‘to do’; *gir* ‘to go’; *ster*, ‘to stay’. We suggest *der* to be replaced by the regular verb *donner*.

8.1 *Der* ‘to give’ – simple tenses

8.1.1 Indicative

Present: mi I day, ti te das, el al (ella la) da, nous e dem, vous e deis, lour i dan.
