ABSTRACT The 1688 Version of the Bible represents a key moment in the development of the Romanian ecclesiastical language. To this day the Orthodox translation of the Bible currently in use, as well as the Romanian Orthodox service books, mirrors the structures of the Cantacuzino Bible. This paper attempts to track some of these structures back to the Greek original of the Bible. Matthew's Gospel makes for an excellent source of samples suitable, through both their variety and great frequency, for a study of this nature. Presented here are some provisional results of this analysis.

KEYWORDS the Bible of Bucharest (1688), the New Testament of Bălgrad (1648), translation, participle

1. Preliminaries

Participles are extremely common in Classical Greek as well as in neo-testamentary Greek. Their grammatical and lexical flexibility accounts for their use in various constructions and clauses¹. A participle (P) is often used in association with a finite verb (V), complementing the meaning of the latter, thus forming a participial cluster (C). A participial cluster (C) usually contains one P (C1), e.g. the well-known type *ἀποκριθεὶς εἶπεν*², but one should expect to find a much wider range of

¹ “That the Greeks were *φιλομέτοχοι* is a common saying...” (Gildersleeve 1888: 139).

² This participle is used in a narrative formula occurring very frequently in the Greek New Testament. See Gildersleeve 1888: 153, in reference to participial occurrences in the Gk: “Surely the formula *ἀποκριθεὶς εἶπε* for the synoptics and *ἀπεκρίθη καὶ εἶπε* for John is a compendium of the whole situation”.

examples, given the large inventory of verbs as well as the occurrence of clusters containing more than one P (C2, C3, and C4). There are also instances of participles used either attributively, i.e. modifying a noun or a pronoun and falling usually within the article-noun group, or as a substantive, i.e. without an expressed noun. In both the 1688 Bible of Bucharest (BB) and the 1648 New Testament of Bălgrad (NTB) Greek participles are rendered in various ways: as a substantive (S), as a gerund (G), as a P, as a secondary clause (sC) and even as a main clause (mC). A descriptive analysis of the structures used in the BB to translate the Greek participle could give an insight into the style of both Romanian versions of the New Testament (henceforth *mt*; when used in relation to an example, it shows their agreement), and subsequently identify lines of development of Biblical Romanian, which in the 17th century was still in its early stages.

This paper undertakes such an analysis of the two aforementioned Romanian versions of the New Testament. It focuses on Matthew's Gospel (MG), since its Greek text (Gk) provides a wide range of syntactical and lexical structures relevant to the topic. Their linguistic analysis is purely descriptive, revealing conclusions based on a large inventory of examples. This could be a preliminary attempt at describing the syntax of the Romanian New Testament and, in a wider perspective, a modest contribution to the history of literary Romanian.

The main objective of my analysis is to identify the solutions adopted by the *mt* in dealing with Greek participles, for, given the idiomatic differences between the Romanian and the Greek usage of non-finite verbs, a wider range of renditions of Greek participles is to be expected in both Romanian versions.

The well-known derivation of the BB from the NTB is of great help to our understanding of the translations adopted by the BB, and for this reason both versions are cited in parallel (the BB is always the first).

The following preliminary conclusions will need to be checked against a similar analysis of the rest of the *mt*. The variety of renderings in both Romanian versions, as well as the difficult classification of an unexpectedly wide range of linguistic data have meant that the inventory of examples analysed is rather large. The method used in selecting these

reflects both their variety and their frequency. Many of the Greek participles used without an article occur in narrative *formulae*, hence a classification by semantic areas appears to be satisfactory. This seems to be reinforced by the diversity of renderings in the *mt*, which can in turn be grouped in two categories: phrases and clauses (secondary and even main). Greek participles with article, on the other hand, tend to be translated much more precisely, and so the two versions share a substantial amount of identical renderings. The presence or absence of the article has also proved a useful criterion in my effort to systematise the examples selected.

The examples illustrating the semantic area of walking/ sitting are extremely numerous, over one hundred in Gk. The following verbs feature: ἔρχεσθαι, προσέρχεσθαι (a se aprobia, veni, merge), ἐξέρχεσθαι (a ieși), εἰσέρχεσθαι (a intră), ἀπέρχεσθαι (a merge, ieși), προέρχεσθαι (a merge) și πορεύεσθαι (a merge, a se duce). The next most frequent are a few compounds of βαίνειν: ἀναβαίνειν, ἐμβαίνειν, ἐπιβαίνειν, καταβαίνειν, μεταβαίνειν (a sui, a intră, a veni, a se pogorî), ἀφεῖναι (a lăsa), περιπατεῖν (a îmbla), and, finally, there are some verbs, such as στρέφειν, ἐπιστρέφειν (a se întoarce), ἀποδημεῖν (a merge departe), ἐπανάγειν (a se înturna), ἀναβιβάζειν (a se sui, a trage), with only one or two occurrences, along which a few verbs of staying can also be mentioned: ιστάναι, κάθεσθαι, καθεύδειν (a sta, a sedea, dormi).

It is worth noting that the same verb in Gk can have different translations. *"Eρχεσθαι* and its compounds, for example, have three different translation, listed here in order of frequency:

- a) *a se aprobia* (11, 12, 13, 14, 17, 18, 19, 22);
- b) *a veni* (1-10, 16, 21);
- c) *a merge* (15, 20).

The use of *a merge* appears to be a novelty in the NTB since for the examples quoted both versions offer the same rendering.

The translation of C1 (P plus V): The BB invariably applies the solution G plus V (GV), translating literally and keeping the same word order. The NTB employs various strategies, as follows:

- a) GV/ VG (9, 11, 14, 15, 17, 18, 21);
- b) V, V (two finite verbs in parataxis), in 5, 6, 10, 13, 16, 22;
- c) V+V (two finite verbs coordinated by conjunction) in 3, 7, 12;
- d) VsV/ sVV (two finite verbs of which one is subordinate) in 1, 2, 4, 8, 19, 20.

In no. 21 a Greek absolute participle followed by another P has been assimilated to a C1.

The phrase *pînd viind* (1) is also worth noting, as the Romanian G does not usually take a preposition. Among the selected examples there are two other similar instances: *deaca viind* (257) and *deaca trecînd* (267). The origin of this type of structure which changes V into a G lies in the BB.

23. *οἱ δὲ ἔξελθόντες ἀπῆλθον*³, 8.32: iară ei, deaca ieșiră, mearseră *mt*
24. *ἔξελθὼν... εἰδε,* 14.14, 26.71: ieșind ... văzu *mt*
25. *ἔξελθοῦσα ... ἐκραύγασεν ... λέγουσα,* 15.22: ieși ... strigă ... grăind *mt*
26. *ἔξελθὼν ... εἶδεν ... ἐστῶτας,* 20.3: ieșind ... văzu ... stând *mt*
27. *ἔξελθὼν ... εὑρεν ... ἐστῶτας,* 20.6: ieșind ... află ... stând *mt*
28. *ἔξελθὼν ... ἐποίησεν,* 20.5: ieșind ... făcu | ieși ... feace
29. *ἔξελθοῦσαι ... ἐδραμον,* 28.8: ieșind ... alergără | ieșiră curînd

All occurrences of this participle are invariably translated as 'a ieși'.

It is worth emphasising that the two Romanian versions are in agreement here. The consistency of the NTB is probably down to the formulaic usage of this participle in the Gk as well to its occurring exclusively in the aorist tense, which is also the tense of the main verb. The literal translation offered by the NTB has been then re-used as such by the BB, which favoured the structure GV.

In Gk, the P is usually in the aorist tense, far less frequently in the present tense – with the exception of *ἔρχεσθαι*: 8, 9 –, and only once in the perfect tense: 47. As the Romanian G does not allow for any distinction of tense, number or gender, these are lost in translation, e.g. 25 and 29, where all the participles in Gk are rendered invariably with *iesind*. Conversely, the same Greek P can be found rendered by different synonyms in the *rmt* as in 6 and 7, where *ἐλθόντες* is rendered as *mergînd* and then *vînd*.

The BB clearly opts for the use of the G in rendering the P, which the NTB translates as a V. There are some noticeable differences between the BB and the NTB, as are differences between solutions adopted inside the same translation: in ex. 15 and 16 a double contrast can be noticed: a lexical one: *a merge* vs. *a veni*, and a morphological one: G vs. V. The BB and NTB are generally consistent with their respective choice when translating not only *ἔρχεσθαι* and its compounds, but other verbs of movement as well: the BB uses GV, while NTB adopts varied solutions:

- a) GV/ VG: 32, 40, 44, 47, 53, 57, 59, etc.;
- b) V, V: 31, 32, 33, 36, 38, 41, 43, 46, 50;
- c) V+V: 30, 39, 51;
- d) VVs/ VsV: 37, 50.

Example 50 presents two C1 linked by a coordinating conjunction, which explains why it has been listed both under b) and under d) above.

The structure used by the NTB and re-used literally by the BB, is PV + PV, but NTB innovates: V, V + VsV. For a more detailed analysis of the solutions adopted by the NTB see *infra*, 4.1.

Identical solutions of translation are rare. Even when the same structure is being used, the BB makes lexical changes, e.g. 42 (on which see further details under *Conclusion*), or 54.

These features explain the individual style of the BB and reveal that the principle which guided the translators was that of a literal rendering. Thus, of all the examples of this kind in MG, more than a half are G in the BB, which correspond to a subordinate clause in the NTB.

⁴ In line with these examples cf. also Mt. 21.15: τοὺς παῖδας τοὺς κράζοντας ... καὶ λέγοντας, *apfiii* (porobocii NTB) strigînd ... și zicind *rnt*, which is probably the only exemple of a P with article rendered through G.

82. ἀποκριθεὶς ... εἶπε(ν), 3.15; 4.4, 13.37, 14.28, 16.2; 21.29, 30; 25.12; 26.23:

92. ὥφθη ... συλλαλοῦντες, 17.3: să arătă ... grăind *mt*
93. ἐλάλησεν ... λέγων, 23.1-2: grăi ... zicînd *mt*

This is an area of comparable frequency to the previous one, with over one hundred occurrences in the MG. The verbs represented are: *λέγειν* (a zice, a grăi), *ἀποκρίνεσθαι* (a răspunde), *προσκαλεῖσθαι* (a chëma) și (*συλλαλεῖν* (a grăi). Most examples contain the present P of *λέγειν* or *λαλεῖν*. Less numerous are the examples with the aorist P of *ἀποκρίνεσθαι* or *παρακαλεῖσθαι*. Sometimes, the P modifies a verb from the same semantic area (77, 79, 80-86, 90).

This selection of examples offers a much more homogenous image than the previous one in at least two respects.

Firstly, the formulaic style is strongly associated with this semantic area, much more than it was the case in the previous section: over a quarter of the occurrences in the MG are represented by the formula *ἀποκριθεὶς εἶπε*, which seems to encourage the repetitiveness *tale quale* in the BB. This is confirmed by the examples 82-86. Secondly, G occurs now much more frequently in the NTB, which explains the high number of renderings shared by the two translations.

Interestingly enough, the same applies to the group of examples following the type *ἀποκριθεὶς... εἶπε*, under 82-86, for which the NTB offers both solutions of translation: the usual structure V, V (*răspunse* ..., *zise*, under 82, 83) as well as the standard GV structure (*răspunzînd...* *zise*).

The only exception is no. 86, probably a haplography in the NTB of the type *Iisus <răspunse,> zise*, mechanically copied in the BB.

The examples containing the verb *προσκαλεῖσθαι* under 87-90 illustrate both the agreement and the usual divergent treatment: G in the BB and V in the NTB.

The distribution of the two renderings *a grăi* and *a zice* does not appear to be governed by any criterion. Most often the BB follows the NTB: 67, 68, etc., but occasionally becomes independent, e.g. 78.

This selection is not the easiest to systematise, as it covers unrelated semantic areas attested in varying degrees of frequency. For the purpose of this research, an attempt is being made at grouping them as follows:

- a) The first half, arranged according to the well-known category of *verba dicendi-sentiendi* contains the following groups: seeing (94-102), hearing (103-111), intellectual activities *lato sensu* (112-121), states and acts of will (122-141) and religious actions (142-163).
- b) The second half contains a single group with various participles arranged by frequency (164-209).

The occurrence of various participial clusters⁶ C2, C3, C4 in different groups of this section, complicated further my attempts at a systematic analysis of the examples above.

The examples selected illustrate some features of Biblical Romanian *in statu nascendi*. Firstly, it becomes apparent that the BB differs from the NTB by opting exclusively for the G, which makes its renderings very literal; the examples 180-185 are highly relevant in this respect, as is the agreement with the NTB in 79, i.e. in a place where the NTB had adopted the G solution. In the NTB, on the other hand, sometimes a hesitation between G and V is noticeable, e.g. in the difference between 130 and 129, and between 138 and 137.

In one instance the BB innovates in a rather unusual manner: at no. 200 the Gk has the structure V+GV which the NTB turns into a standard V + V + V, whilst the BB opts for GV +V.

Examples 95-103, 107-108, and 113-120, attest the *rnt* consensus. The same applies for 168-170 and 172-173: the consensus occurs exclusively when the NTB opts for G. Interestingly, whilst *ἀναβλέπειν* is

⁶ More details about participial clusters can be found *infra*, under 4.1.

translated by *a căuta*: 94, *βλέπειν* is rendered by *a vedea*: 96, and so is the aorist *ἰδών/ -όντες*: 99, 100, etc., whereas *θεωρεῖν* by *a privă*: 102.

Nos. 103-111 illustrate the formula containing the participle *ἀκούσαντες*, which is rendered differently in the BB than in the NTB: whenever the NTB opts for GV, the BB follows in, e.g.: 103, 107, 108, 110, 113, 114, 115, etc.

Sometimes the BB shows consistency where the NTB had used synonyms, e.g. 118-119, where *stiu* and *înțelegind* in the NTB are rendered by *conoscind* in the BB; sometimes, the BB follows faithfully the NTB e.g. 120.

It is worth noting that the NTB does not hesitate to explore more subtle solutions, as in 121, 126 or 127.

A technical verb such as *εὐλογεῖν* is rendered by *a blagoslovi*, in no. 146, *rnt*. The verb *εὐχαριστεῖν*, on the other hand, is translated differently under 147: *blagoslovind* in the BB, but *deade har* in the NTB, a phrase similar to *dînd laudă* in 145, which translates the same verb in Gk.

The participle absolute is an important narrative structure centred on the P. Since in the *rmt* it is most frequently rendered by G, it is presented under this heading, e.g. 211-218, etc. The construction is well represented in Gk with approx. 70 occurrences, from which 37 have been selected. Of these, the group 210-218 represents a recurrent formula of the narrative: a chronological reference. The BB renders these examples through G, with the exception of 210, where the solution adopted by the NTB is preferred. G is in fact by far the best represented rendering in the NTB as well, which offers only 8 examples of a subordinate clause.

Nearly three quarters of the examples selected, 27, are in agreement. In the other examples the differences are both lexical: 214, 244, 217, 246, and syntactical, e.g. 213, 218, 219, 223, 224, 242, etc.

Examples 201-216 illustrate several variant translations in both versions, involving the variation *a fi/ a se face* or the presence/ the absence of the article with the S: *sară/ sara*. Example no. 217 illustrates

the absolute dative in the MG.⁷ Once again, the elegant solution adopted by the NTB contrasts with the awkward renderings of the BB.

2.2. Participle translated by a noun/ participle/ adjective

- 247. δαιμονιζομένους, 8.16: îndrăcit (-ți) *rnt*
- 248. δαιμονιζόμενον, 9.33: îndrăcit *rnt*
- 249. ἀπολελυμένην, 19.9: lăsată de altul *rnt*
- 250. θηλαζόντων, 21.16: sugătorilor *rnt*

- 255. ἀσθενοῦντα, 25.39: bolnav | beteag

This is an important section which shows the innovative spirit of the NTB. In all examples, the Greek P has been rendered by S: 253, by participial substantives: 247, 248, by *nomen agentis*: 250, or, lastly, by adjectives: 254, 255.

The majority of the examples attest the consensus *rnt*, with the exception of 252 and 255. If 255 illustrates a lexical change in the BB, in 252 another difference between the BB and the NTB becomes apparent in the preference for Latin-based renderings.⁸

Some of the solutions adopted in this section occur also in the section discussing the participle with article (see *infra*, 3.). Thus, for *bolnav*, v. also 295, 296, and for *blagosloviți*, v. 316.

292. νηστεύων, 6.17: cînd postești¹⁰ *mt*.

⁹ The translation of ἀπέρχεσθαι is unusual.

¹⁰ Cf. νηστεύσας ... ὕστερον ἐπείνασε, 4.2: postind ... apoi flămînzi | deaca posti ... apoi flămînzi.

The examples gathered in this section, although they represent the same actions as in the previous sections, differ from those by translating P with a clause, usually sC. Occasionally, however, P is rendered through a mC: 256, 261, 263, 282, 284, 286, 288, 289.

There is nothing new in the translation of a P with a clause in the NTB, but the fact that BB is now (generally) agreeing with the NTB is new. On one occasion only, 274, the BB expands the *nomen agentis* used by the NTB into a relative clause. In a few other cases, the BB operates lexical adjustments to the text of the NTB: 260, 269, 286, or syntactical, e.g. 276, 281, 288, and 291.

It is worth noting that the BB uses the solutions adopted by the NTB even in situations in which the initial preference had been for another solution: *supta*, in the ex. 141, *Ματθαῖον λεγόμενον*, the BB has *Mattheiu chemindu-l*, whereas the NTB has *de-l chema Matteiu*. Nevertheless, in this section there are four occurrences in which the same P is rendered by a clause in both versions: 269-272. Only very rarely a clause in the BB corresponds to a G in the NTB: 291.

The NTB often translates a Greek P with a temporal clause introduced through *deaca/ dacă*; a quarter of the examples selected illustrate this type, e.g. 259, 275, etc. The BB uses all of these renderings, but on two instances changes (inadvertently?) V into G: 257 and 267. Several examples attest renderings by a mC: 258, 261, 263, 281, 284, 288 and 289.

The most important feature of this section is the faithfulness showed by the BB to the solutions adopted by the NTB almost without exception.

Many examples show a preference in the BB for using the demonstrative (adjectival) article: 293, 302, 303, 305, 306, 308, 309, 313, 316, and 318. More than half of these examples are in consensus, which means that the BB follows in the NTB: 302, 303, 305, 308, 309, 313, 316, 317, and 318. As a matter of fact, the BB often adopts in this section the majority of the solutions found in the NTB, be those expressed through P or through S.

The P is used in many examples: 293, 294, 302, 303, 305, 308, 309, 312, 313, 315, 318, and so is the S: 295, 296, 297, 298, 300, 301, 304, 307, 310, 311, 314, and 319. Occasionally, the NTB would hesitate and use variants, whereas the BB makes consistent use of the same rendition, 298 vs 299, 300 vs 301.

¹¹ The translation of *πορευθείς* is omitted in the BB, probably through haplography.

A special mention needs to be made about 306, where the NTB has a periphrastic form of future, more logically perhaps; the BB, on the other hand, offers a literal rendition of the aorist passive participle.

This section consists of a selection of P with article rendered mostly by a clause. The nearly complete consensus *rmt* is again worth mentioning, and even more so in a section represented by over one hundred examples.

The usual rendering in the *rmt* is the relative clause. There are only two exceptions in the NTB, when the rendition is through S: 348, *nomen agentis*: 388.

There are changes which the BB operates, correcting the tense of the V in Gk: 337 (the second P), 341 (the second P), 343.

Sometimes the BB uses previously modified solutions: in this respect nos. 330 and 331 are in contrast with no. 62. Another innovation

of the BB is the changing of a *nomen agentis* in the NTB into a relative clause in 348 and 388. A similar type of change in the BB can also be seen in 354, 355, and even in 363, where the G is used.

Occasionally, the NTB uses two synonyms to render the same Greek verb, which are accepted by the BB, e.g. 325, 3268, and 327. The opposite can be seen in 374, 375, 376, where *a omorī* renders both ἀποκτείνειν and φονεύειν.

362 is unusual: the Gk has the structure PV which is rendered by the NTB as VG; the BB, on the other hand, changes the original structure into sVmV.

4. Conclusion

The participial constructions are rendered in the BB as follows: P without article are translated by G, whereas P with article are translated, as in the NTB, through a sV. The NTB, however, prefers the translation by verbs coordinated either by a conjunction or paratactically. Lastly, the existence of various solutions to translate the same Greek P could indicate the translators' concern with the current verse to the detriment of a unity of expression across the whole text.

Certain types of error in the BB would hint at a less polished, at times, rushed, translation. If so, then this would come in support of what has been already inferred by Cândea 1969: 362-367.

The NTB on the other hand tends to be more creative, firstly by not restricting the translation of a P to a G; it also shows much more care in preserving the idiomacity of the target-language. Lastly, there are a couple of examples when the NTB favours Latin-derived words over their Slavonic equivalent: *a blagoslovi* is relevant from this point of view.¹⁴

4.1. Participial clusters

The translation of the participle can also be followed in the rendering of the participial clusters C2, C3 and C4, analysed below:

1) C2 are the most frequent in Gk: the examples listed below are quoted by the number allocated to them in sections 2 and 3, in which

¹⁴ See the discussion of nos. 145-147 as well as no. 252.

there are well over 50 occurrences of C2 with various word-order patterns in Gk. There are three such patterns as follows:

98.	PVP	VVG	<i>rnt</i>	209	PVP	V+VG	V+VG
379	PP	V+V	<i>rnt</i>	384	PP	V+V	<i>rnt</i>

a) The first pattern is PVP in Gk, with 51 occurrences. The BB usually offers a literal translation, GVG (3, 20, 44, 72, 73, 76, etc.), but not always: 17 (innovation), 42, 108, 209. The last three examples are inspired by the NTB where several solutions are being used:

- i. literal, GVG: 76, 85, 98, etc.;
- ii. V+VG: 3, 42, 72, etc.;
- iii. V, VG (two finite verbs in parataxis): 17, 73, 77, etc.;
- iv. VsVG (the second finite verb is subordinated to the first one): 44;
- v. VGG: 20.

b) The second pattern is PPV in Gk, illustrated by 12 examples and rendered by GGV in the BB with one exception, no. 191, probably under the influence of the NTB, which has V, V+V. The NTB uses the following:

- i. VsGV: 8, 145, 146;
 - ii. GGV (in agreement): 19, 115;
 - iii. VVV: 58, 61, 91, see details in the table;
 - iv. GVVV: 34, 137, 204.
- c) The third pattern is VPP in Gk; there are six occurrences, rendered by VGG in the BB, and variously in the NTB, as follows:

- i. VGG: 64, 116, 157;
- ii. V, V +V: 176, 201;
- iii. VGsC: 126.

2) C3, with 18 occurrences in the current selection of examples, 14 of which are in agreement.

Ex.	Gk	BB	NTB	Ex.	Gk	BB	NTB

109	PPVP	GGVG	GV, VG				
113	PPP	GGG	<i>rmt</i>				
166	PPPV	GGGV	V, V, V, V				

- a) The pattern PPP occurs nine times, and is rendered eight times by GGG, and once by V, V, V (the NTB influence). The NTB generally uses the same pattern, with the exception of 162, which is rendered by PGG.
 b) the pattern PPVP occurs eight times, mostly in agreement, with the NTB as a model:

- i. GVG: 52, 79, 265;
- ii. GVG: 71, 101, 109, 170.

The BB uses most solutions offered by the NTB with only one exception: in example no. 166, the NTB has V, V, V, V, while the BB opts for GGGV. Only one example of C3 is different from the patterns

mentioned above: no. 379, which has the pattern PVPVP in Gk, rendered with VVGVG in the BB, but VV, VV, V in the NTB.

3) C4 has three occurrences as follows:

Ex.	Gk	BB	NTB
56	PPPP	GGGG	<i>rnt</i>
94	PPPVVP	GGGVGV	V,V,V,V,V
171	PPPPV	VGGGV	V+GV+V+V

If the first example is translated in agreement, the other two are typical of the choices in favour with their respective translators: while the G is almost nonexistent in the NTB, it is used in the BB in seven out of eight cases.

Despite the existence of stereotypical, repetitive narratives in Gk, the *rnt* do not necessarily follow suit in this respect: the same verb is rendered differently and the same noun has two equivalents in the *rnt*, etc. The formulaic variation, both lexical and syntactical, in the *rnt* indicates either the translators' intention to avoid monotony, or their focus on a given line without correlating it to other identical contexts.

Examples 164-175 seem to illustrate an incipient awareness of the synonymy in Greek on the part of the *rnt* translators: whilst 164-174 translate *λαμβάνειν* and *παραλάμβανειν* identically with *a lua*, no. 175 renders *προσλάμβανειν* by *a apisa*. One may suppose that the innovation belongs to the NTB which offers different renderings in 174 as well; these, however, are not followed by the BB. The same applies to ex. 184 where the NTB innovates: *mîndă*, although the same verb is translated with *a trimite*. At the other extreme, no. 178 attests the translation of two different Greek verbs with the same one in Romanian: *συλλέγειν* and *ἐκριζοῦν* are both rendered with *a zmuște* in the *rnt*. Lastly, example no. 200 is worth mentioning for the exclusive use the BB makes of the G: the finite verb *προσῆλθεν* is rendered by *apropiindu-se*. The same applies to the three examples already mentioned, in which the BB modifies the solutions offered by the NTB, replacing V with G: *pînă rînd* (1), *deacă rînd* (2), and *deaca trecînd* (3).

5. Excursus

Lastly, it may not be without interest to see the main tendencies of the BB and the NTB, respectively, reflected in forms belonging to finite verb paradigms. The following three additions to the main analysis focus, therefore, on what I regard as important criteria to differentiate the BB from the NTB:

1. the use of the present perfect vs. aorist;
2. the use of the reflexive form with passive meaning (henceforth *tpa*) vs the passive form (henceforth *pa*), and
3. the rendering of a stereotype formula introducing a quotation from the Old Testament.

5.1. Perfect vs. aorist

398. ἐγέννησε, 1.2 *pass.*: au născut | născu; Vulg.: *genuit*
 399. ἐγεννήθη, 1.16: S-au născut | născu; Vulg.: *natus est*
 400. ὅτι τὸν ἥλιον αὐτοῦ ἀνατέλλει, 5.45: căci răsare pre soarele Său | că face să răsără soarele Său; Vulg.: *oriri facit*
 401. ἐποίησεν ὡς προσέταξεν αὐτῷ, 1.24: au făcut cum au poruncit lui | făcu cumu-i porunci lui
 402. ὑπέδειξεν ὅμιν, 3.7: v-au arătat voao | vă arătă voao
 403. ἔλαβε, 8.17: au luat | luă
 404. ἐκράτησε τῆς χειρὸς αὐτῆς, 9.25: o au apucat de mînă | o prinse de mîna ei
 405. ἦ ... ὑψωθεῖσα, 11.23: ceea ce te-ai înălțat | ce te înălțăsi
 406. μετενόησαν, 12.41: căci s-au pocăit | că ei se pocăiră
 407. ἤλθεν, 12.42: că au venit | că veni
 408. ἐντείλατο λέγων, 15.4: au poruncit grăind | porunci grăind
 409. ἐξέβαλε, 21.12: le-au răsturnat | le răsturnă
 410. ἐποίησε, 21.31: au făcut | feace
 411. ἐνύσταξαν ... ἐκάθευδον, 25.5: au adormitat ... dormiia | adurmitară ... adurmîră, Vulg., Beza: *dormierunt*.
 412. ἔστησαν αὐτῷ, 26.15: au pus lui | deaderă lui
 413. σὺ εἶπας, 26.25: tu ai zis | tu zisești
 414. ἤκολούθησαν, 27.55: au mersu | mearseră
 415. τὰ γενόμενα, 28.11: ceale ce s-au făcut | toate cîte fură
 416. ἦ γένεσις ... οὕτως ἦν, 1.18: nașterea ... aşa era | nașterea ... aşa fu;

Vulg.: *sic erat*, Beza: *ita fuit*

417. ἐκάλεσε ... παρέδωκεν, 25.14: chemă ... deade | chiamă ... dă; Vulg., Beza: *vocauit ... tradidit*

418. ὁ ἔλατόμησεν ἐν τῇ πέτρᾳ, 27.60: l-au cioplit în piatră | carele tăiese din piatră; Vulg.: *quod exciderat in petra*

These examples show clearly the BB's distaste for the aorist (simple past). The nos. 398, 399, and 400 offer a further contrast between the reflexive voice with a passive meaning and the active voice. If the NTB seems to innovate in this point (v. the Vulg. *ad loc.*, likely to be the source of the NTB), the example no. 400 shows the strong preference the BB has for a literal translation.

It can also be noted that the *rpa* replaces in the BB the *pa* used by the NTB (on which see more in the next section). An example *sui generis* is no. 415, *τὰ γενόμενα*.

It is clear that the NTB adopts sometimes solutions from the Beza edition, both the Vulgate translation (called by Beza *vetus* and printed in italics) and Beza's own translation (called by him *nova*, and accompanied by marginal notes).

431. ὁ παῖς μου, εἰς ὃν εὐδόκησεν, 12.18: Fiul Mieu ... în Carele binevru | sluga mea ... în carele să odihni; Vulg.: *puer*, Beza: *seruus*¹⁶
432. εὑρέθη ἐν γαστρὶ ἔχουσα, 1.18: află-se în pîntece avînd | află-să îngreuiată cf. 1.23: în pîntece va avea – va priimî în sine

435. εύνουχίσθησαν ὑπὸ τῶν ἀνθρώπων ... εύνουχισαν ἔσωτοὺς, 19.12: s-au scopit de oameni ... s-au scopit pre înșîș | carii-s giugăniți de oameni ... să giugănesc înșîși pre sine; Vulg., Beza: *eunuchi qui castrati* (Vulg.: *facti*) sunt ab hominibus ... se ipsos castrarunt

437. ἐγένετο αὕτη, 21.42: s-au făcut aceasta | iaste aceasta; Vulg., Beza: *factum est*
438. ὅπως δοξασθῶσιν ὑπὸ τῶν ἀνθρώπων, 6.2: ca să să măreasă de către oameni | ca să-i laude oamenii: Vulg.: *ut honorificentur* (Beza: *gloriam consequantur*) ab hominibus

The BB most often avoids the use of *pa*, using instead the *rpa*. The NTB, on the other hand, prefers the *pa* in most instances with very few exceptions: 424, 429, and 432. The last one is also worth mentioning for the standard opposition between the BB and the NTB: if the BB translates it literally, as expected, the NTB innovates in the rendering of *ἐν γαστρὶ ἔχουσα* by ‘îngreuiată’, probably in an attempt to avoid giving too graphic a description referring to the Holy Theotokos. The same applies, I think, to the second example listed under the same entry, 432: *ἐν γαστρὶ ἔξει*, translated by ‘va priimî în sine’.

The literal translation favoured by the BB becomes apparent in every example, but even more so in those in which the original text is polysemantic and the selected meaning does not suit the context: 420, 428, and 429. The examples 429 and 431 are relevant in this respect, as the BB follows the literal principle without correlating it to the theological context, which is what the NTB does.

¹⁵ Cf. OSB, Mt. 11.5: ‘the poor have the gospel preached to them’.

¹⁶ Cf. OSB, Mt. 12.18: ‘My Servant’ etc.

Lastly, it is interesting to note that in no. 431 (quotation from Isaia, 42.1) *παῖς* is rendered in the BB by 'Fiiul', although in Isaia *ad loc.* the BB translation runs 'Sluga Mea'.

Another manner of rendering the passive preferred by the NTB is the use of an intransitive verb. Occasionally, the NTB renders the original construction in the Gk into active voice: no. 427, 437, and 438. The NTB is visibly reliant on the Latin version, although sometimes prefers different solutions: 427, 438.

471. οὐκ ἀνέγνωτε τὸ ρῆθεν, 22.31: au n-ati cetit ce s-au zis | ce e zis; Lat. *quod dictum est*

The formulaic nature of the phrases introducing quotations from the Old Testament, which is obvious in Gk, is kept in the Romanian versions as well. The variants in the *rnt* are discussed below.

In the first formula, nos. 439-448, both versions render *πληροῦν* by ‘a împlea’, with one exception: 441 has ‘a plini’, in *rnt*. The BB had used this verb two verses above, no. 440.

The first formula also contains the participle *ρῆθεν*¹⁷, nos. 439-448, to which nos. 449-452 are added, translated by ‘zis(-ă)’, which the BB replaces with ‘a grăi’ in: 441, 442, 445, 449, 453, 454, 458, 459. The NTB, on the other hand, opts for ‘a grăi’ once, rendering *λέγων* in no. 451 rather unusually with a G, following probably Beza, *dicens*. The BB also adopts this solution. The same P occurs in 452, but is translated by

¹⁷ This participle is attested only in *Matthew*, twelve times.

‘zicind’, which the BB adopts, too. The masculine form appears in one occurrence only: *ρηθείς*, no. 471.

This selection of examples is also representative for the differences in rendering the passive in both versions; the BB prefers the use of the *rpa* mostly in perfectum praesens: 441, 442, 443, 445, 450, 451, 452, and 471. Yet, the BB also illustrates occasionally the *pa*: 439, 440 (*rmt*), 444 (*rmt*), 446 and 447 (*rmt*), 449. The corresponding forms in the NTB are usually present passive: 440 (*rmt*), 441, 442, 444 (*rmt*), 445, 446 and 447 (*rmt*), 450, 451, 452, and 471. Finally, the NTB follows one or the other Latin translations.

The next P is *λέγων (-ουσα)*, nos. 453-455; all occurrences are in consensus; 453 and 455 have ‘a zice’, whereas 454 has ‘a grāi’. Finally, the P is translated with the G in 454 and 455.

The next formula is centred on the form *ἐπέθη*, nos. 456-461. The BB tends to ignore the recurrent nature of a narrative formula, as can be seen from the examples nos. 459, 460, and 461, whilst the NTB keeps a strict one-to-one distribution between original and translation. The *rmt* uses the verb ‘a zice’, with one exception: in 461 BB, prefers ‘a grāi’. The tenses used are as follows: the BB employs exclusively the perfectum praesens *rpa*, and the NTB the aorist passive, with one exception: in no. 456 there is ‘au fost zis’, which I regard as a perfect passive, influenced by the Lat.

The third formula contains the verb *γέγραπται*, nos. 462-467. The NTB has the present passive form of ‘a scrie’, whereas the BB uses the *perfectum praesens* in *rpa* four times; the first two examples are in consensus.

The last three examples contain the verb *ἀναγιγνώσκειν*, nos. 469-471; the translation of the adverb offers variants in 469 and 470, but, on the other hand, the translations are in consensus. 471 contrast the perfect in *rpa* in the BB with the prs *pa* in the NTB.

Finally, all occurrences of present in *pa* in the NTB in this section are an influence of the Latin translations found in the Beza edition of the New Testament. That explains the contrast with the BB, whose revisors translated literally the Greek aorist passive forms.

On the same line, it is worth mentioning that whenever the Latin has a perfect passive formed with the present tense of *esse*, the NTB translates it by a present tense, e.g. 6, 7, 8, whilst a passive formed with the perfect of *esse* is rendered by an aorist passive in the NTB, e.g. 2, 11, 12, partially 23, 24, 25.
